Sample Mean Report

Mean Score

This report type represents the average of responses to a survey question or group of questions (category). The mean is calculated by adding all the responses to a given question and dividing the sum by the total amount of responses. The result is indicated by a number and graphically displayed as a bar graph.

If an answer option has been identified as "Not Applicable" (N/A), those responses will be automatically excluded from the calculation of the Mean score. This ensures that the average is based on the "meaningful" responses.

This report is recommended when you need an overall summary of survey results. The Mean report will provide an at-a-glance look at the data which is very valuable when you are looking at large amounts of data or when you simply need the average scores.

Demographic Summary

Self	1
Boss	1
Direct Report	3
Peer	3
Customer	4
Other	3
Total	15

Sample Mean Report
